

Nulogx Announces Transportation Control, Software as a Service (TC/SaaS)

Nulogx is pleased to announce that its industry leading Third Party logistics (3PL) Transportation Management Solutions are now available as a service based on the power, stability and scalability of IBM's System i platform.

Toronto, ON ([PRWeb](#)) August 13, 2007 -- Nulogx Inc., a leading provider of Third Party Logistics and Transportation Management Solutions (TMS) that deliver Real Return on Logistics™ (ROL), announces the release of Transportation Control, Software as a Service (TC/SaaS).

Nulogx is pleased to announce that its industry leading Third Party logistics (3PL) Transportation Management Solutions are now available as a service based on the power, stability and scalability of IBM's System i platform. This new option is designed to provide an alternative method for small and medium sized 3PL's to gain access to the infrastructure and functionality critical to profitable growth.

"The SaaS model provides us with the opportunity to supply an underserved segment of the marketplace that cannot justify the capital expenditure to acquire the advanced applications utilized by the large 3PL's. Payment on a usage basis levels the playing field and allows small and medium 3PL's to leverage their creativity and competitive strategy in winning new business without being held back by technology," says Doug Metcalfe, VP Business Development.

Companies who are considering hiring new staff to accommodate growth should seriously consider TC/SaaS. The Return-on-Logistics (ROL) is immediate as operational expenses are offset by productivity and cost reductions. Additional benefits include real time visibility, gross margin analysis, network metrics and automated freight payment and audit. Also included are tools for customers and carriers to automate their processes. Bottom line, TC/SaaS provides the functional infrastructure to automate, measure and control a complex logistics network profitably.

About Nulogx Inc.:

Founded in 2002, Nulogx is the leading provider of IBM System i based Transportation Management Solutions (TMS). Nulogx' software provides 3/4PLs, manufacturers and distributors the ability to control shipping costs through the automation and optimization of the entire shipment (inbound, outbound or interfacility) lifecycle. Nulogx customers manage over \$2.5BN in freight spend through Nulogx software. Nulogx helps 3PL's/4PL's and shippers of all sizes reduce transportation costs, increase productivity and provide the shipper, their customer and carrier partners with a greater level of knowledge of their logistics network. Nulogx is based in Toronto, Ontario, Canada. www.nulogx.com
